

**GUESS  
THE ONCOLOGIST**

**Dr. Usnsa tedn**

Hint: A Medical Oncologist at The Ottawa Hospital Cancer Centre and Associate Professor in the Department of Medicine at the University of Ottawa. She obtained her MD at McMaster University and completed her postgraduate training in Internal Medicine at the University of Ottawa. She continued her training in Medical Oncology in Ottawa, followed by a fellowship year in Clinical Research with the National Cancer Institute of Canada Clinical Trials Group.

**ONCOLOGIST  
IN THE HOT SEAT**

Everyone's practice is different, Oncologist in the Hot seat aims to provide insight into other esteemed Canadian oncologists regarding work-life balance, leadership, mentorship, or career development. The first oncologist that we featured practices in British Columbia. Since then we have been working our way across Canada, featuring oncologists from each province in the country. Our next stop is the province of Québec. From Québec, we are very pleased to introduce **Dr. JF Boileau** and **Dr. Julie Lemieux**.

**Dr. Boileau**

Dr. Boileau is a surgical oncologist and clinician scientist at the Montreal Jewish General Hospital. He is an assistant professor in the Department of Surgery at McGill University. He has worked as staff surgeon at the Centre Hospitalier Universitaire de Montreal (CHUM) and at the Sunnybrook Odette Cancer Centre in Toronto before transferring to his current position.

**Abstract**

End-of-life decision making in cancer can be a complicated process. Patients and families encounter multiple providers throughout their cancer care. When the efforts of these providers are not well coordinated in teams, opportunities for high-quality, longitudinal goals of care discussions can be missed. This article reviews the case of a 55-year-old man with lung cancer, illustrating the barriers and missed opportunities for end-of-life decision making in his care through the lens of team leadership, a key principle in the science of teams. The challenges demonstrated in this case reflect the importance of the four functions of team leadership: information search and structuring, information use in problem solving, managing personnel resources, and managing material resources. Engaging in shared leadership of these four functions can help care providers improve their interactions with patients and families concerning end-of-life care decision making. This shared leadership can also produce a cohesive care plan that benefits from the expertise of the range of available providers while reflecting patient needs and preferences. Clinicians and researchers should consider the roles of team leadership functions and shared leadership in improving patient care when developing and studying models of cancer care delivery.

**To Friend or Not to Friend: The Use of Social Media in Clinical Oncology**

**Abstract**

Online social networking has replaced more traditional methods of personal and professional communication in many segments of society today. The wide reach and immediacy of social media facilitate dissemination of knowledge in advocacy and cancer education, but the usefulness of social media in personal relationships between patients and providers is still unclear. Although professional guidelines regarding e-mail communication may be relevant to social media, the inherent openness in social networks creates potential boundary and privacy issues in the provider-patient context. This commentary seeks to increase provider awareness of unique issues and challenges raised by the integration of social networking into oncology communications.
